

IIID Mobility Days 2020

Online, 4-6 November 2020, Mumbai Time 12:30 - 15:30

Navigating the City – Information and mobility design for high-density multilingual environments

Cities have many faces, and they are a conglomerate of multiple entities compressed into a density that is highly challenging for the people who live and work there. High diversity in population, a multilingual environment, the gap between digital possibilities, and the reality of the travel experience are currently shaping our cities.

In this context, under the theme of navigation, solutions that make travel easy and enjoyable for everyone are essential components in defining a city. The conference in Mumbai is a call to understand individual perspectives on navigating and “using” the city, and how the quality of the mobility experience will be shaping city life in the future.
